

SPSS is an annual license. The current license year is August 1, 2007 - July 31, 2008. For continual use of your SPSS License you may submit your reorder in the middle of July 2008.

SPSS no longer uses serial numbers but instead authorization codes. As you install your copies, you will be presented with 3 choices: Standalone, Site License & Server/Network Installs. Select Site License and use the below information:

To update your license: All installations will need to go through the SPSS License Authorization Wizard process in order for the license to run.

If you choose not to go thru the SPSS License Authorization Wizard, your copy will be considered a 'trial' copy and will time-out in approximately 2 weeks.

1. Click on START and go to PROGRAMS -- look for the entry "SPSS FOR WINDOWS" and select the "LICENSE AUTHORIZATION WIZARD" option.
2. Insert the authorization code as shown below -- please wait for the application to complete the registration process.

You will need the following information to install your license:

Serial #: 9792806

Organization: North Dakota State University

Authorization for standalone/site installs is:

ef6f98c4045b822596c6

DO NOT USE THIS AUTH CODE FOR SERVER/NETWORK INSTALLS

** NDSU is listed as our contact organization for the HECN agreement with SPSS. Please use North Dakota State University as the Organization name if you are performing a new installation of SPSS 16

If you were using SPSS 15 or a previous version, you do not have to uninstall that older version of SPSS. However, make sure you install SPSS 16 in the same directory. By installing SPSS 16 in the same directory as your previous version, you will preserve your customized settings. If you uninstall your previous version, you will lose those settings.

When the installation process comes to an end, click on "Launch License Authorization Wizard". Click start on the new window that pops up. Then, select "Use Authorization via Internet to get License". Enter in your authorization code here. Now your product should be registered.
